Run Summary

Signal	Value
Total cases	148
Answerable cases	132
Unanswerable cases	16
Completed batches	30 / 30
Batch size	5
Unique case IDs	148
RAGAS	Skipped because OPENAI_API_KEY was not present in the runtime environment

Aggregate Metrics

Metric	Value
Citation coverage	1.0000
Negative abstention rate	0.0000
Mean latency	18523.09 ms
p95 latency	21227.98 ms
Max latency	41658.92 ms
Source return rate	1.0000
Average sources per case	3.00
Metadata coverage	1.0000
Total retry count	0
Max attempts	1

Batch Results

Each row is one deterministic batch of five test cases, except the final batch which contains the remaining three cases. No batch-level retries were needed.

Methodology

The evaluator sent all suite test cases to the public Railway n8n webhook in deterministic batches of five cases. Each response was normalized into the evaluation schema, including answer text, retrieved contexts, source metadata, latency, and observability fields. The final report merges all timestamped batch JSON files and recomputes aggregate metrics across all 148 cases.

Interpretation

The public Railway endpoint completed all 148 test cases across 30 batches with no failed batches. Every case returned at least one source and the endpoint returned an average of three sources per case. The full row-level CSV is available for case inspection, and the consolidated JSON can be reused for a RAGAS scoring pass once a judge API key is configured.
